

Keeping the UConn Program Running

 Role: Program Administrator  Version 0.1 (draft)  Reviewed May 2026

 **Draft** — example content pending review and sign-off. Do not use for training until approved.

Proposed task set — confirm with Vanessa

The admin role's exact responsibilities are not yet finalized. The tasks below are a starting proposal drawn from the pilot's operational needs; treat them as a draft to react to, not a settled scope.

The administrator keeps the program's operational backbone in place — staff readiness, system access, materials, data requests, and subcontractors — so the clinical team can focus on participants.

Scope

What this role covers, and where its boundaries are (proposed).

For	Cena's program administrator(s) supporting the UConn Health pilot.
Covers	Staff training and credential tracking, system-access provisioning, materials-distribution tracking, UConn data-export requests, and subcontractor onboarding.
Does not cover	Clinical work (Registered Dietitian), participant care coordination (Care Coordinator), or participant enrollment intake (Enrollment & Onboarding SOP).

Recurring administration tasks

The standing responsibilities that keep the program compliant and running.

1 Track staff training and credentials

- 📌 In the staff training tracker — every staff member and MPH student.
- ✓ Everyone who touches participant data has current CITI / IRB training on file.
- ⓘ Someone without current training must not be given access to participant data.

2 Provision role-based system access

- 📌 In the system admin settings.
- ✓ Each person has exactly the access their role requires under the IRB protocol — no more.

3 Track materials distribution

- 📌 In the materials-distribution tracker.
- ✓ A record of which educational materials and recipe booklets (English / Spanish) reached which participant.

4 Fulfill UConn data-export requests

- 📌 Through the data-export process.
- ✓ Requested data delivered to UConn in a non-proprietary format within 15 days.
- ⓘ The 15-day turnaround is a contract requirement — start promptly when a request comes in.

5 Onboard subcontractors with signed BAAs

- 📌 Through the subcontractor onboarding checklist.
- ✓ Kitchen, delivery, and clinical subcontractors are onboarded with a signed BAA before they handle any participant data.

When someone needs access

The one branch that comes up often — and the gate that protects participant data.

Their CITI / IRB training is current

→ Provision the access their role requires under the IRB protocol.

Their training is missing or expired

→ Hold access until training is complete. No participant-data access without current training.

Quick reference

The standing checks, condensed.

Keep current

- ☐ Every staff member and MPH student has current CITI / IRB training
- ☐ System access matches each person's role under the IRB protocol
- ☐ Materials distribution is logged per participant
- ☐ Any open UConn data-export request is on track for the 15-day window
- ☐ Every active subcontractor has a signed BAA on file

Terms used in this SOP

Plain-language definitions.

CITI / IRB training	The required human-subjects research training everyone must complete before working with participant data.
IRB protocol	The study's approved rules for how the research is run, including who may see what data.
BAA	Business Associate Agreement — the contract a partner signs before they're allowed to handle participant data.
Role-based access	Giving each person only the system access their job needs — nothing more.
Non-proprietary format	A common, openable file type (not locked to one vendor's software) that UConn can use without Cena's tools.

Sign-off

Approved for use only when the scope is confirmed and the gates are signed.

 Sign-off

-  Scope confirmed — Vanessa Sena (admin task set)
-  Operationally true — Vanessa Sena
-  Signed off — Director of Clinical Ops

Awaiting scope confirmation + sign-off — draft
